

NOTES2

DIGITAL RECORDING & MINUTING SOFTWARE

Twain2 Notes is a recording and playback solution designed for Secretariat personnel whose primary function is the recording and production of Minutes. Ideally suited for pre-hearing investigations, Board Meetings, Council and Legislative assemblies. Adhering to the Twain2 Philosophy of empowering people, this product boasts features such as instant volume adjustment, insertion of Index Markers and forensically safe recording algorithms.

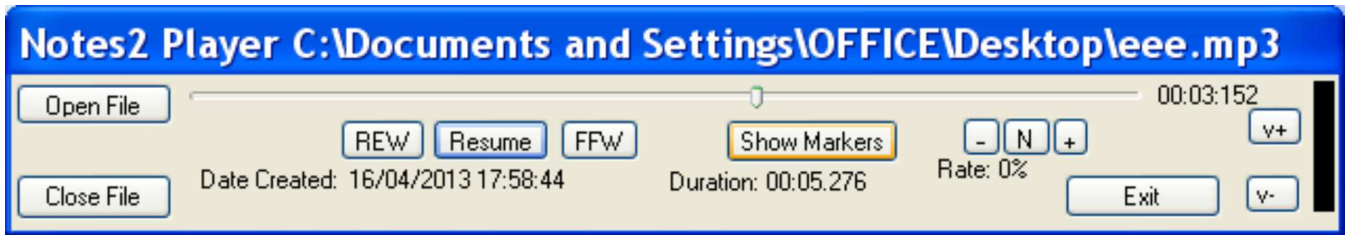

Whilst our recordings are secure, dynamic distribution is easy – our base format is .mp3. Thus most typical Windows Audio solutions can open and play a non-intelligent version of the recording.

Notes2 can open and play most common Windows media formats such as .wav etc. The Player features typical transcription features such as auto rewind after playback was paused. A new feature is the ability to change the playback speed on the fly without distraction of having to tab between your word processor and Notes2. The same applies for Volume adjustment – you can do it directly from the Notes2 main console.

Index markers function as they should – state of the art technology ensures that they are there to assist instead of being a distraction.

The image below shows the Notes2 Interface when Index markers are not required. The Notes2 Player interface dynamically expands and contracts as and when Index markers are selected.

Notes2 showcases the future of transcription – pedal free. Hassle Free

Notes2 - a cost effective solution with advanced features.
